SKILLS

- Core Java
- AWS
- Microservices
- Spring Boot
- CI/CD
- Jenkins
- Git
- REST API
- React JS
- Kafka
- Postgres SQL
- Grafana
- Splunk
- Elastic Search
- Cassandra (No-SQL) Certified
- Postman API testing
- Data Structures And Algorithms

LANGUAGES

HINDI
Native or Bilingual Proficiency

ENGLISH
Full Professional Proficiency

INTERESTS

- Learn New Technologies
- Reading Books

EDUCATION

BTECH (CSE)
Ajay Kumar Garg Engineering College , Ghaziabad (UP)
07/2015 - 08/2018   *75.5%*

POLYTECHNIC (CSE)
Neelkanth Institute of Engineering and Technology, Meerut (UP)
07/2012 - 07/2015   *80.73%*

WORK EXPERIENCE

Consultant- AWS Java Engineer
Deloitte USI

01/2022 - Present
Responsibilities

- Designed and implemented clean, efficient, and scalable code based on user requirements, adhering to agile methodologies and industry best practices for object-oriented programming.
- Designed and implemented scalable, secure multi-tier systems on AWS. Developed and optimized REST APIs, utilizing AWS services like VPC, IAM, Route53, EC2, S3, RDS, Lambda, CloudWatch, and EKS for efficient deployment and monitoring.
- Developed automated deployment workflows using CI/CD strategies that enabled rapid scaling of application resources; this enhancement supported a 50% increase in user traffic without compromising system performance or reliability.
- Led application modernization and migration projects by transitioning legacy systems to cloud-native architectures using AWS services like EKS, Lambda, RDS, and S3. Refactored monolithic applications into microservices-based architectures, improving scalability and performance.
- Participating in all aspects of agile software development, including design, implementation, and deployment. Providing technical guidance on building end-to-end systems, ensuring the architecture supports the requirements of the business solutions.

Senior Analyst Engineer
HCL Technologies

02/2019 - 12/2021
Responsibilities

- Developed and maintained backend services using Java, Spring Boot , and relational databases like Postgres SQL .
- Worked on NoSQL databases (Cassandra, MongoDB) to support high-throughput applications.
- Collaborated with cross-functional teams to integrate user-facing elements with server-side logic, building highly available systems aligned with client requirements.
- Tested, debugged, and resolved coding issues to enhance the reliability, performance, and maintainability of software applications.

Intern
GeeksforGeeks

Responsibilities

- Curated and published over 100+ well-researched articles on emerging technologies, including NoSQL databases and Big Data; gathered user engagement metrics showing a steady increase of 150+ monthly readers within six months.

ACHIEVEMENTS

Earned a certificate for participation in multiple technical workshops.
